

## Responsibility

We will actively develop and promote plastic solutions designed to minimize the carbon footprint for our clients, both during production and throughout the products life cycle. By focus on sustainability in every stage, we aim to deliver products that not only meet our clients' needs but also contribute to a greener and more responsible future.

## Reductions

We are committed to reduce our environmental footprint by optimizing resource utilization in every aspect of our operations. This includes reducing our relative energy, waste and water consumption, and emissions wherever possible. We conduct responsible waste management with external recycle partners and will only procure electricity produced by renewable energy.

## Improvements

We work to support continuous improvement of the company's environmental and energy performance. When making investments, environmental considerations, we seek to prioritize technologies and solutions that can help reduce environmental impact where feasible. By incorporating these considerations into our operations and decision-making processes, we aim to contribute to ongoing environmental and energy improvements over time.

## Compliance

We are committed to adhering to all environmental, energy, and safety regulations, along with other pertinent requirements established in Denmark. By maintaining full compliance, we ensure our operations uphold the highest standards and contribute to a safer, more responsible workplace and company.
